

How Upland PD Minimized Scheduling Errors and Saved Over 700+ Hours Annually on Payroll Operations

Upland Police Department, CA

CASE STUDY

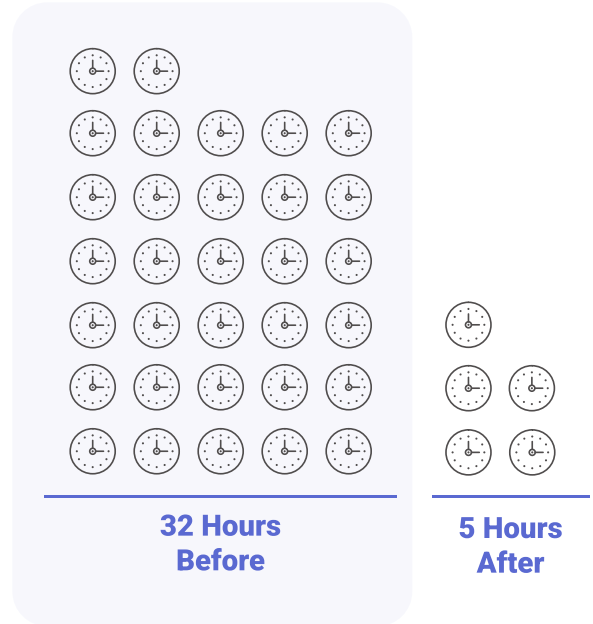

CHALLENGE ONE

It would take their budgeting specialist 3-4 days to process payroll. She would have to manually go through over 125 timesheets and key in the data every two weeks. They would also have to physically sign off on timesheets.

✓ OUTCOME

Reduced payroll processing by over two days

Now it only takes them 4-5 hours to process payroll and they set up a three step verification process in the system so everyone can verify their timesheet from wherever they are.

CHALLENGE TWO

Everything from their schedule to time off requests were on paper before. This resulted in some schedule and approval mistakes.

✓ OUTCOME

Visibility from anywhere and decrease in schedule errors

Now everyone can request time off, submit overtime, and check their schedule on their mobile devices. Updates to time banks and timesheets are automated in the system, ensuring accuracy.

One thing that I really love about PowerTime is that I can access it anywhere. Because our day doesn't end when we leave the office.
